## About the Conference:

India has been implementing health programmes for more than six decades now, the progress has been significant but slow. There is need to review these programs in the light of the scientific basis of implementing the health programs. Most of these health programmes start as pilot projects under very controlled environment. Observing the success of the projects then it is rolled out to other states usually without assessing the socio-economic status of the areas to be implemented in the health system and the programme will be implemented uniformly, in spite of the wide variation due to health system management and financial commitment of the govt. And many new health programmes are starting without integrating the existing programmes and evidence. This conference will focus on clinical & public health problems of India and at Global level with special reference to National health programme Implementation in the health system. Clinical epidemiology mainly focus on health of the people by doing needs assessment, studying the economic impact of health care interventions, evidence based medicine, ethical basis for clinical practice, vaccinology, genetic epidemiology, geriatric health problems, managerial issues in health programme Implementation and health system strengthening.

INDIA CLEN has a membership of internationally trained researchers which includes clinicians and public health experts in clinical epidemiology. This is a multi-disciplinary group in all areas of clinical epidemiology. For more details visit [www.indiaclen.org](http://www.indiaclen.org), [www.inclen.org](http://www.inclen.org).

## Resource Persons:
